FLEXIO BRINGS DIGITAL TRANSFORMATION TO THE INDUSTRIAL SECTOR

French start-up, Flexio, provider of smart industry software solutions, continues its growth. After completing its first round of seed funding in December 2017, the company has signed several POCs (Proof of Concept) with key accounts.

Founded in 2016, the SaaS software company enables its customers to compose their own business applications. This allow them to digitize, in the space of a few days instead of several months, all their maintenance, quality, production and HSE processes.

Data collection & processing made easy

The software solution offered is based on **a web platform powered by an ecosystem** to connect all users apps & software, **aggregating all types of data**. In addition, Flexio has designed **a digital toolbox**: dashboards, mobile application, connected objects (iot), to facilitate data collection & processing. The main idea is to **simplify the execution of the most time-consuming processes** by automating workflows delivering key information in the right place at the right time.

With this SaaS solution, Flexio aims to put a stop to the significant loss of time experienced by employees when collecting useful information, manipulating and filling out manually printed documents or performing tedious & non-value adding processes. **Current customers gained in productivity gain by 20% to 50% for each business process they handled with Flexio.**

The start-up, based in Besançon, France, currently works with around **fifteen customers** including Michelin, EDF, Keolis for key accounts. but also supports French SMEs and ETI in their digital transformation.

What's next for Flexio?

Flexio aims to **win a greater market share in France** and extend its unique solution by **collaborating with its customers to develop new features**. The company also plans to grow its team and reach a dozen of employees by the end of the year. Two new members joined the team last September.

To continue its growth, Flexio **intends to establish abroad starting with Europe and North America.**

«*We need to strengthen our team to meet our users requests and sign new contracts, while focusing on our core commitment: simplifying our customers work and supporting them in their digital transformation.*»
